San Gil, Santander, Colombia • ederyairrodriguezparra1231@gmail.com • github.com/eder1104 • mi-portafolio-eder-rodriguez.onrender.com

PROFESSIONAL SUMMARY

Software Engineer and Full Stack Developer specialized in PHP/Laravel backend development, REST APIs, React frontends, legacy-system integration, and secure web architectures. Experienced building decoupled frontend/backend applications across separate repositories, protected API endpoints with Laravel Sanctum, middleware-based authorization, audit logging, database optimization, and integration with legacy platforms. Strong experience working with PHP legacy systems and extending or modernizing existing applications. Professional experience includes healthcare/clinical appointment platforms and scheduling workflows. Trained in software auditing, cybersecurity, Big Data, software quality, and international ISO standards.

PROFESSIONAL EXPERIENCE

RIOM SAS — Software Engineer | Oct 2025 – 30/09/2026

- Develop and maintain Laravel/PHP backend services and React frontends organized as decoupled applications in separate repositories.
- Design, integrate, and consume REST APIs with protected endpoints using Laravel Sanctum and middleware-based authorization.
- Apply clean development practices and separation of concerns across frontend, backend, authentication, and API layers.
- Implement audit-oriented logging and traceability mechanisms to preserve records of relevant system activity when required.
- Integrate modern applications with legacy platforms using bridge-token based authentication/integration mechanisms.
- Work extensively with PHP legacy systems, extending and modernizing existing functionality while preserving established workflows.
- Optimize database access using complex queries, joins, stored procedures, query optimization, and caching strategies.
- Optimized login performance by implementing caching strategies for Spatie permission synchronization.
- Contribute to healthcare/clinical appointment platforms and scheduling workflows, with attention to secure handling of application data.
- Use AI-assisted development tools as part of software engineering, debugging, research, and problem-solving workflows.

Virgilio Galvis — Full Stack Developer | Apr 2025 – Oct 2025

- Developed and maintained full-stack web applications using PHP/JavaScript technologies and relational databases.
- Contributed to backend, frontend, API integration, and application maintenance tasks.
- Worked with existing application codebases and supported the delivery of production-oriented software features.

EDUCATION

Software Engineering — Tecnológica del Oriente | 2025–2026

ADSO / Software Development — SENA | 2023–2025

CERTIFICATION & STANDARDS

- Software auditing and cybersecurity training.
- ISO/IEC 27001:2022 — Information security management systems.
- ISO/IEC 25000:2014 — Software product quality.

TECHNICAL SKILLS

Backend	PHP, Laravel, REST APIs, Sanctum, Middleware, API Integration
Frontend	React, JavaScript, HTML5, CSS
Databases	MySQL, SQLite, MongoDB, Stored Procedures, Query Optimization, DB Caching
Architecture & Legacy	Decoupled Frontend/Backend, Legacy PHP Systems, System Integration, Bridge Tokens
Security & Quality	API Security, Authentication/Authorization, Audit Logging, Software Auditing
Other	Python, AI-assisted Development, Git/GitHub
Language	English — B2

PORTFOLIO

Portfolio: mi-portafolio-eder-rodriguez.onrender.com — projects demonstrating Laravel, React, and full-stack development.
